

TAKHTI PRINT VERIFICATION

measure the printed sheet BEFORE taping it down

STEP 2 - check the printed TAKHTI

MEASUREMENT	A3	A4 (2/3)	YOU MEASURED
marker square, each side	30.00	20.00	_____
ID0 -> ID1 centre span (across)	243.00	162.00	_____
ID0 -> ID3 centre span (down)	366.00	244.00	_____
ID0 -> ID2 centre span (diagonal)	439.32	292.88	_____
black scale patch, each side	20.00	20.00	_____
horizontal ruler strip, end to end	200.00	130.00	_____
vertical ruler strip, end to end	70.00	60.00	_____
sheet LEFT edge to ID0 left edge	12.00	14.00	_____
sheet TOP edge to ID0 top edge	12.00	16.50	_____
sheet TOP edge to the EXIT line	402.00	276.50	_____
all values in millimetres			

STEP 3 - the verdict

PASS if every measurement is within +/- 0.5 mm of the printed value.

On the 366.0 mm span that is a print-scale error of 0.137 %.

FAIL if any value is out. Do NOT tape it down, do NOT calibrate around it.

Reprint with scaling set to 100% / 'Actual size' / 'None'. A driver set to 'Fit to page' or 'Shrink oversized pages' is the usual cause.

If your sheet disagrees with a whole column by one constant ratio you printed the other variant: 1.500 means A4 art read against the A3 column, 0.667 the reverse.

A4 CAVEAT: the A4 mat rectifies into the SAME buffer as the A3 mat, so every size comes back 1.5x too large unless the system is told the sheet is A4.

Use A3 unless you have no A3 printer.

sheet printed on (printer / date):
